KEY TAKEAWAYS

COURSE TITLE | **SQL Advanced: Finance Analytics**

CHAPTER TITLE | **Stored procedure: Market badge**

1 Classification of an attribute such as country based on criteria such as revenue is an important business use case.

2 One can indicate the input parameter(s) and output parameter by using IN and OUT clauses respectively.

3 Recall: 'GROUP BY' is the function that you will need to perform an aggregation.

4 SQL is the salt of data science that you need in all data recipes.
